

技能+github 操作

打开 git shell

配置用户名和密码 `git config --global user.name ""` `git config --global user.email ""`

创建密钥 `ssh-keygen -t rsa -C ""`

密钥位置 `F:\LM\github_rsa`

测试 `ssh -T git@github.com`

github设置公 电脑端添加 ssh 私钥

```
F:\Users\Super\Documents\GitHub> ssh-add F:/LM/github_rsa/id_rsa
Enter passphrase for F:/LM/github_rsa/id_rsa:
Identity added: F:/LM/github_rsa/id_rsa (F:/LM/github_rsa/id_rsa)
```

其中 `.git/config` 文件

```
[core]
  repositoryformatversion = 0
  filemode = false
  bare = false
  logallrefupdates = true
  symlinks = false
  ignorecase = true
[remote "origin"]
  url = git@github.com:Supermans1201/XBoys0921.git
  fetch = +refs/heads/*:refs/remotes/origin/*
[branch "master"]
  remote = origin
  merge = refs/heads/master
```

合并:

```
git pull origin master
```

推送:

```
git push origin master
```

查看分支

```
git branch
```

查看修改

```
git diff
```

设置文件名中文

```
git config core.quotePath false
```

操作流程

```
git diff
git add .
git commit -m "修改内容信息"
git pull origin master
git push origin master
```

创建仓库

```
token:dece69b8e141007bdd8c3b664e79515eaf69c29e
```

示例

```
Invoke-WebRequest https://api.github.com/user/repos?access_token=dece69b8e141007bdd8c3b664e79515eaf69c29e -Method POST -Body '{"n
```

添加远程配置：

```
git remote add origin git@github.com:supermans1201/learn-nodejs.git
```
